- 1.4 - Next set of captured images.
- 1.5 - Pagination indicator, showing dot-status per pagination view.
- 1.6 - Cancel button makes thingsly modal go away.
- 1.7 - Save button is submit action.

Thumbnail Dimensions and Layout

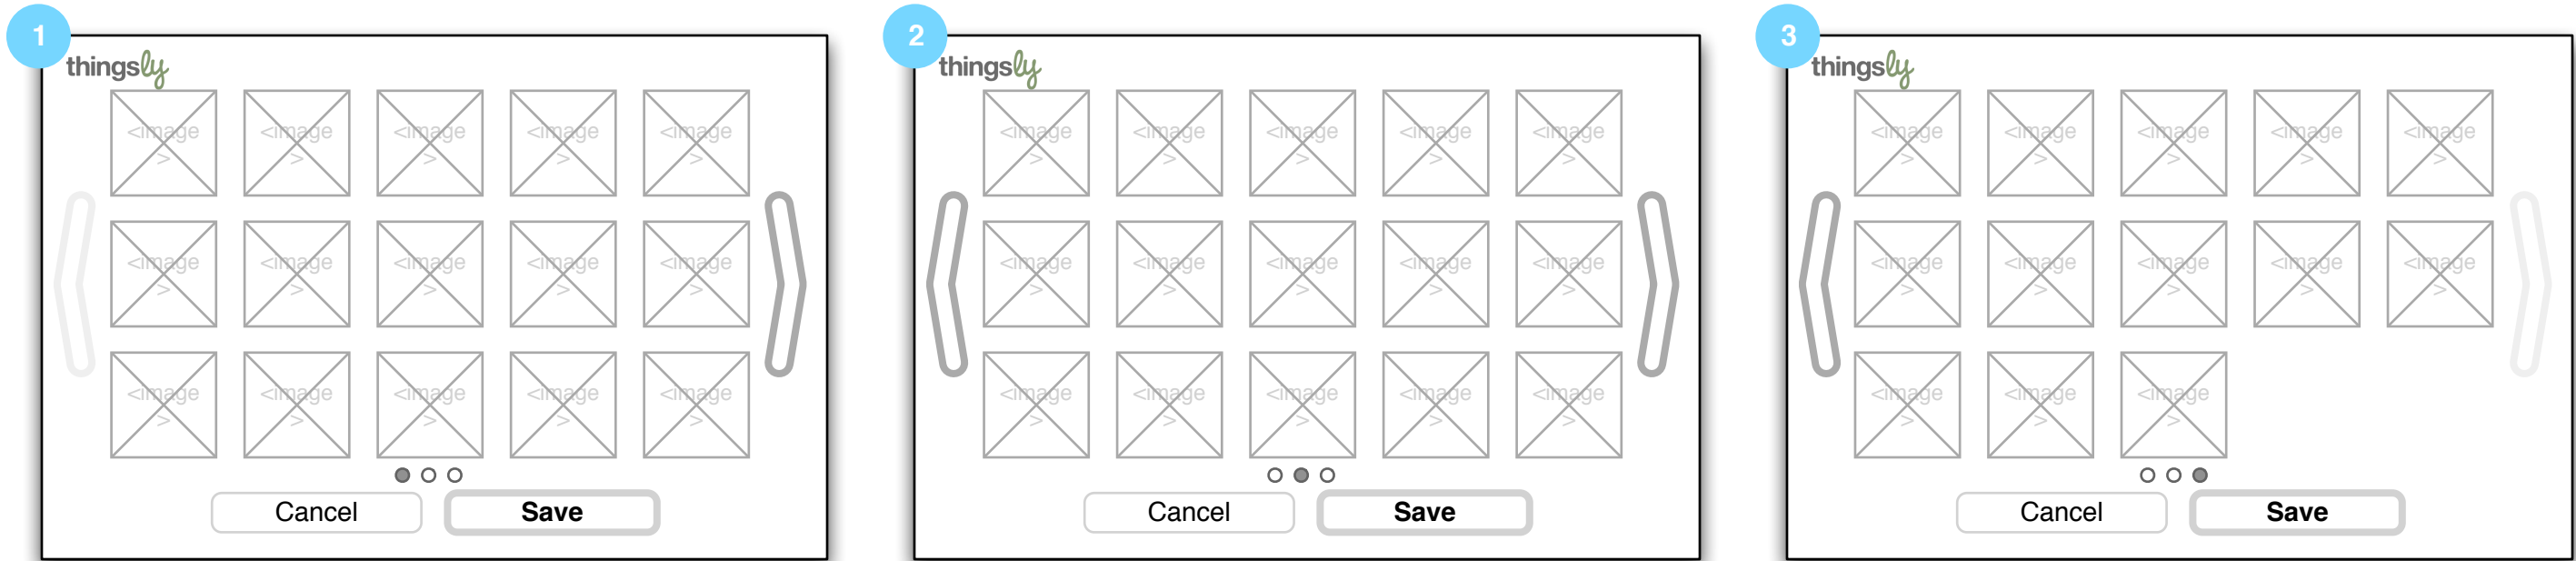

(a) < 19 images - display (up to 18) thumbnails at 250x250px with 3 separate page views, 6 thumbs per page.

(b) < 7 images - display (up to 6) thumbnails at 250x250px, no pagination, 6 thumbs.

(c) > 18 images - display thumbnails at 150x150px, pagination, 15 thumbs per page, with pagination.

Pagination

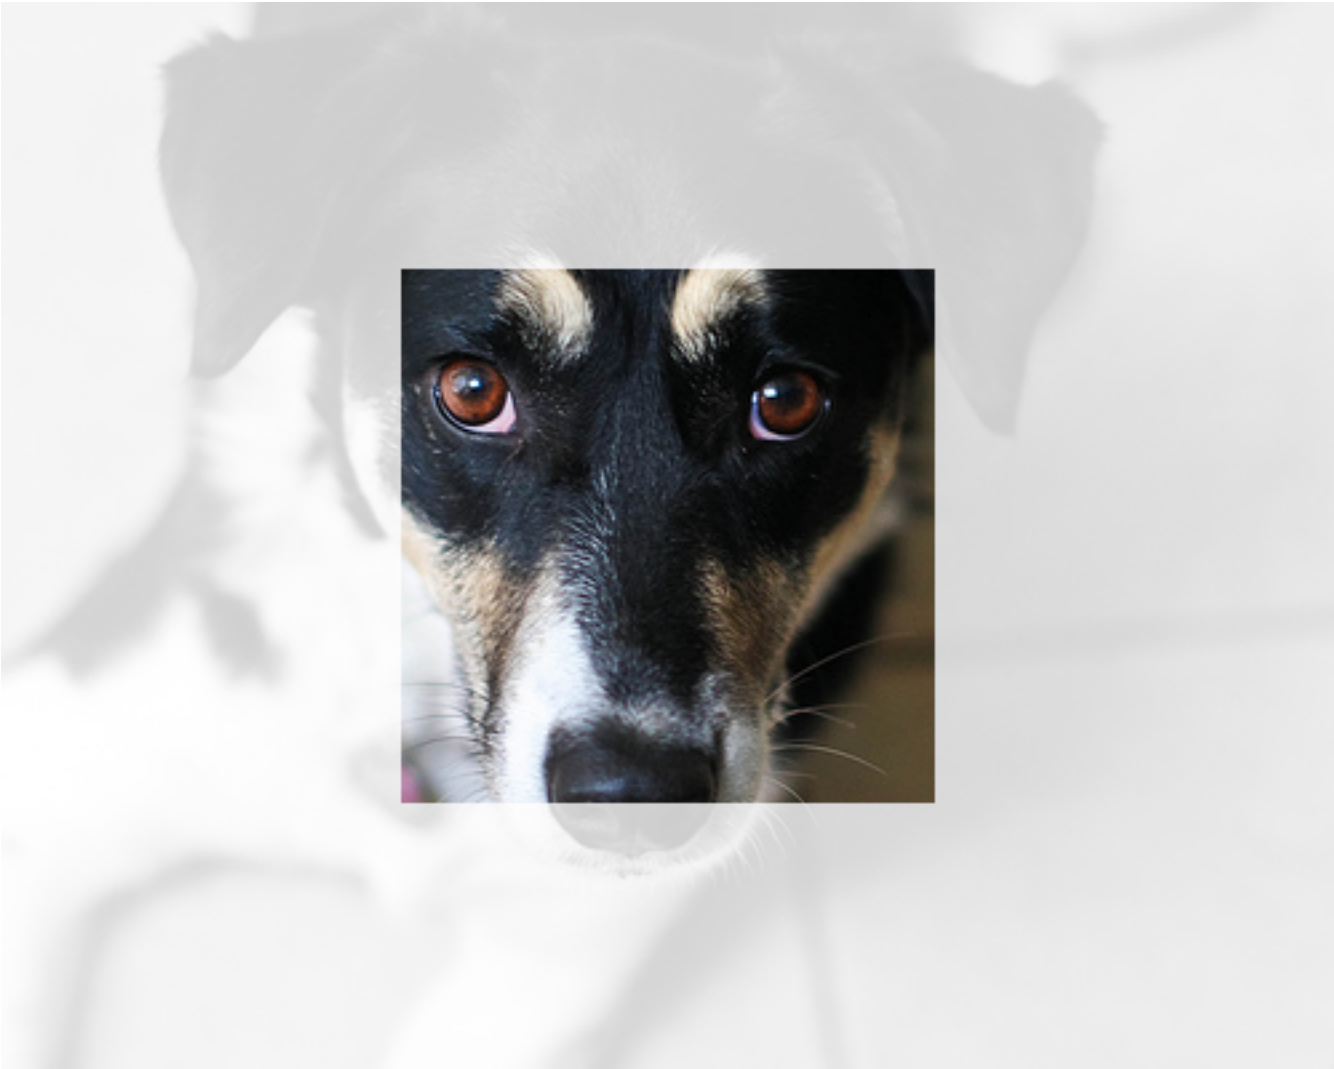

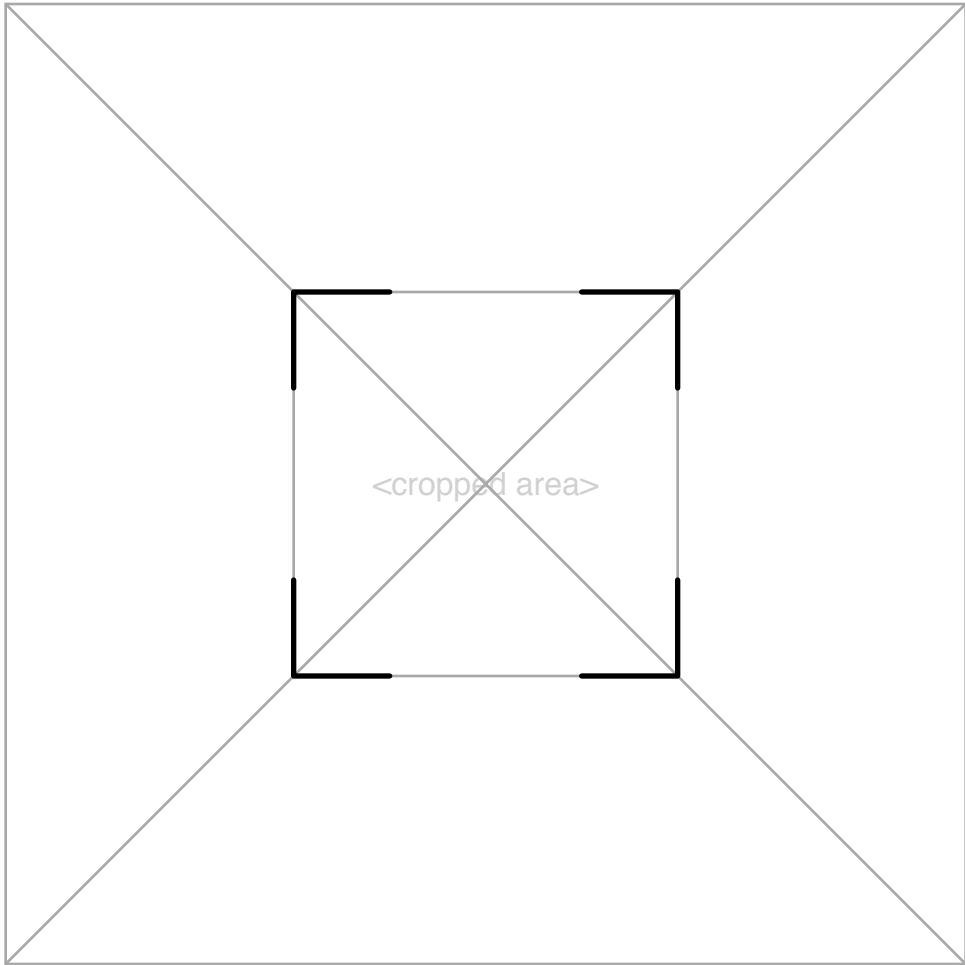

This is a scenario where the user is trying to thrangle a very image-heavy page, which contains 43 images that are > 200x200px.

We display 15 images per page view. Pagination features an intuitive dot-status view at the bottom of the thumbnails, as well as page view buttons that are deactivated if not necessary (e.g. the first page, there is no page-back function).

- 1 - First page of images.
- 2 - Second page of images.
- 3 - Third page of images.

Cropping Function

Different cropping scenarios:

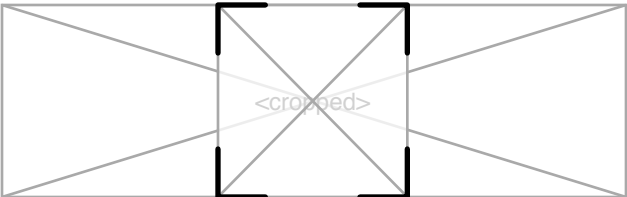

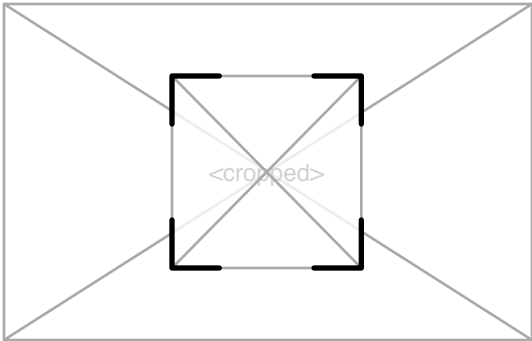

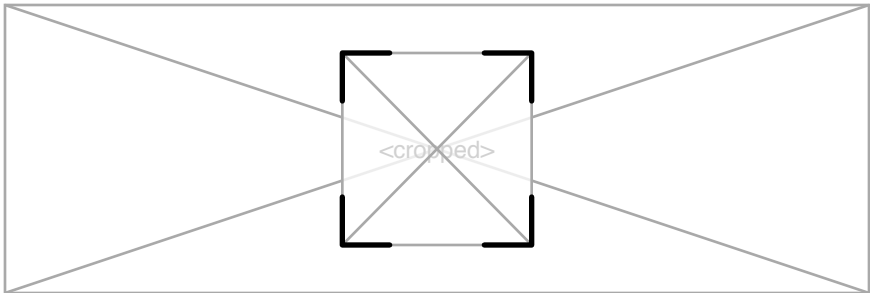

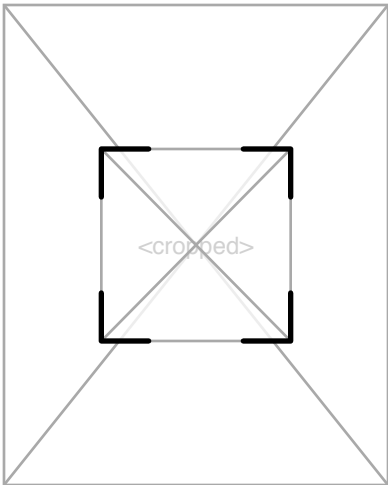

Image Selection - Multiple

The user is able to select multiple thumbnails. Each time the user clicks on a thumbnail, the thumbnail state changes to a 'selected' state. The user can click a 'selected' thumbnail to unselect.

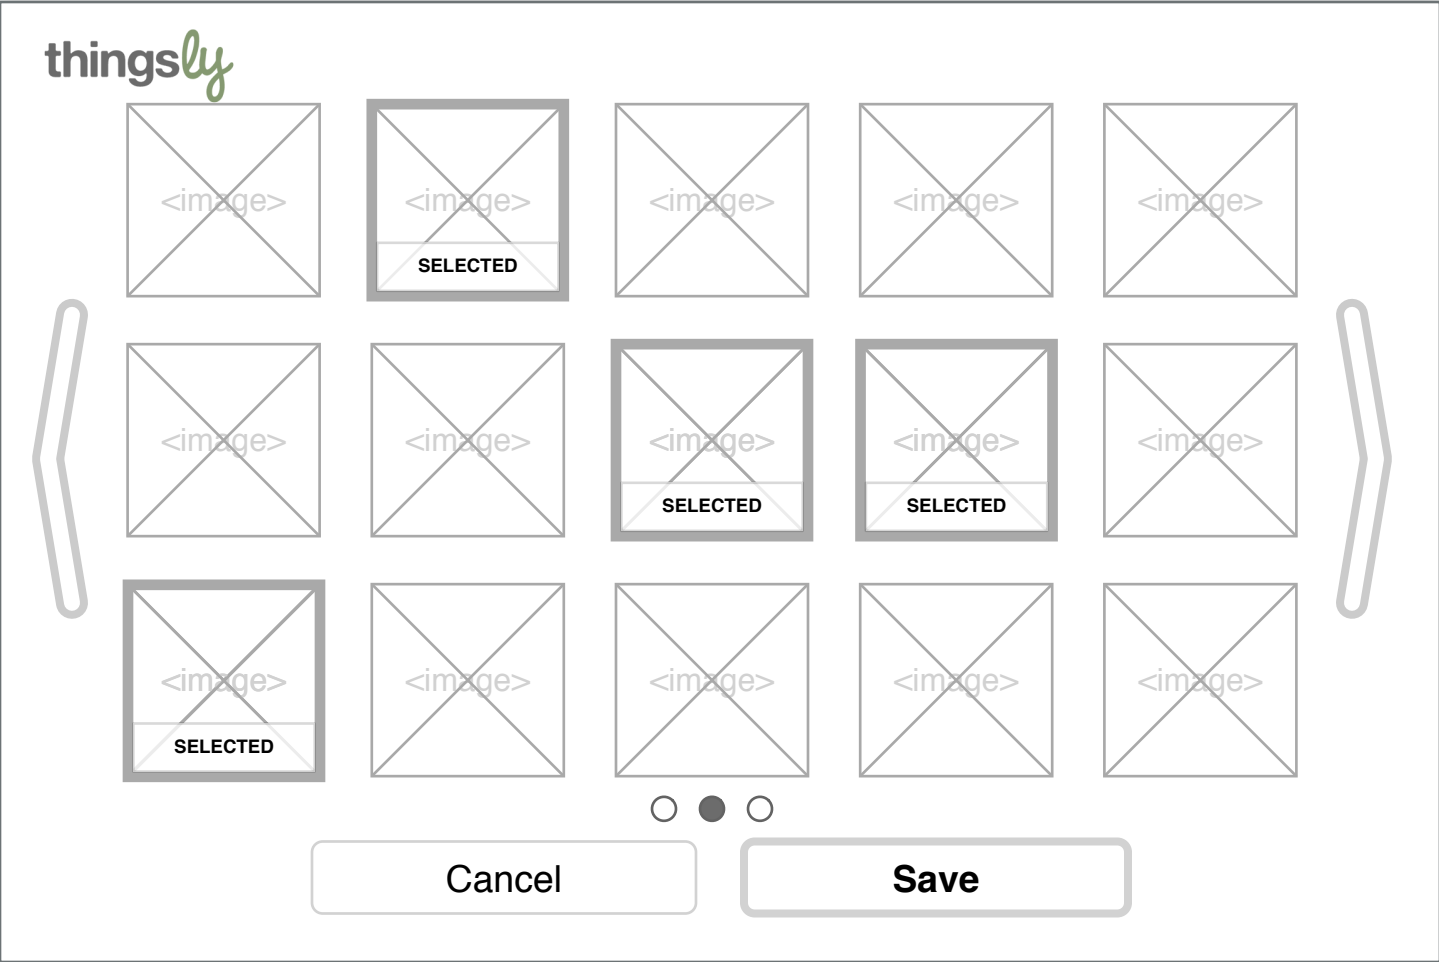

Image Selection - Single

1. In the single-selection mode, the user can only select one thumbnail. 2. Selecting another thumbnail deselects the previous one.
